

Zodiac Coverage Patterns

Product Features

Specifications	ZODIAC PRO	ZODIAC QUAD	ZODIAC PET
Pet immunity:	Rodents	Small dogs & cats	32kg (70lbs) dogs, 4 cats and multiple rodents
Operating voltage: 9 to 16 16VDC regulated	•	•	•
Current consumption:	12mA	12mA	15mA
Alarm contacts: NC, 100mA, 24VDC Max.	•	•	•
Alarm time: 2.2 seconds min.	•	•	•
Selectable pulse count 1, 2, 3	•	•	•
Temperature compensation: Automatic, thermistor controlled	•	•	•
Swivel adjustment: Horizontal: ±25° Vertical: +5°, -20°	•	•	-
Optical filtering: White light protection, pigmented lens	•	•	•
RF immunity (10MHz to 1GHz)	20V/m	25V/m	20V/m
Operating temperature: -10°C to 55°C (14°F to 122°F)	•	•	•
Storage temperature: -20°C to 55°C (-4°F to 122°F)	•	•	•
Dimensions: 10.7 x 5.8 x 3.9cm (4.2 x 2.3 x 1.5in)	•	•	•

The family of sensors
you can trust
to watch over you

ZODIACTM

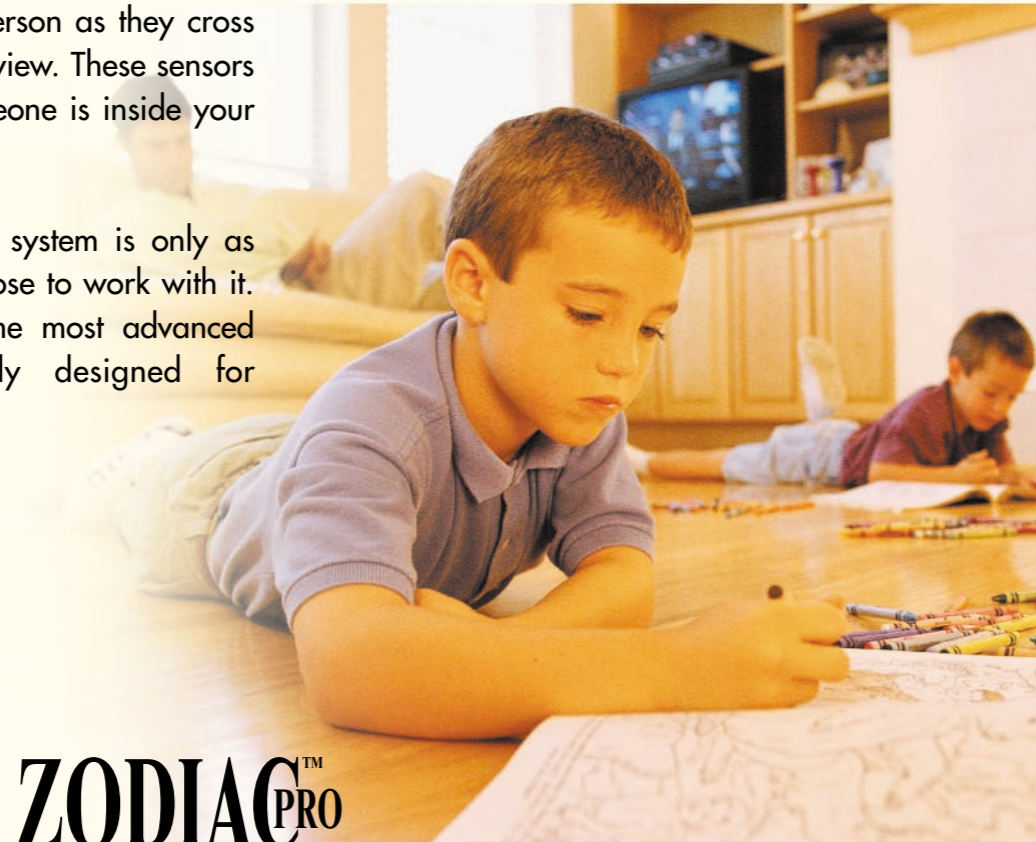

Meet the sensor family that looks after your family

If you're making a decision to invest in the safety of your family and home, you are looking for an alarm system that will meet all your security requirements without interrupting your lifestyle and straining your bank balance.

So how will this security system know when an intruder is in your home? It will use several motion sensors, strategically placed around rooms where there is an exterior access point, like entry doors, sliding doors and windows, to detect the movement of a person as they cross through the sensor's field of view. These sensors then send a signal that someone is inside your home.

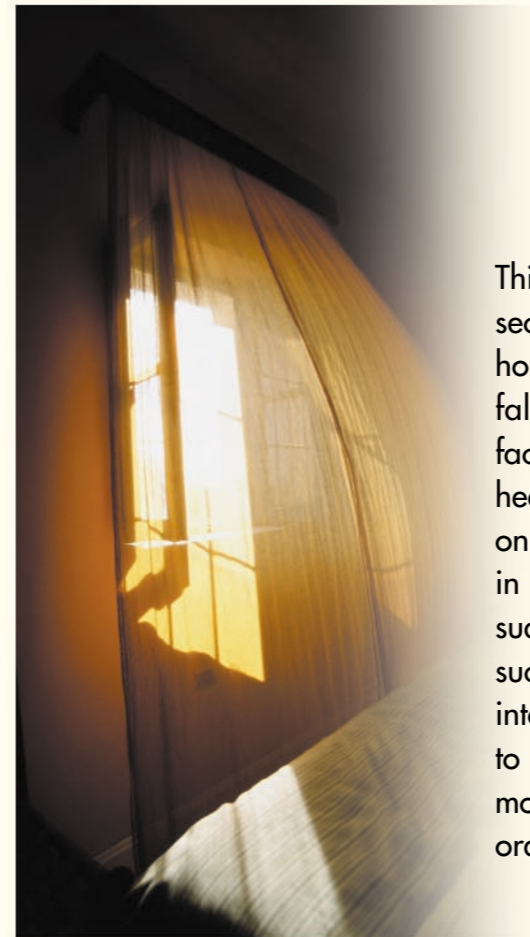

So essentially, your security system is only as good as the sensor you choose to work with it. That's why we offer you the most advanced motion sensors, especially designed for protecting homes like yours.

Meet the Zodiac family of sensors, created with you and your home in mind, offering superior protection at an attractive and affordable price. With three (3) models to choose from, you can easily mix'n'match sensor types to cater to your particular requirements, and still maintain a uniform appearance that won't detract from your home environment.

ZODIACTM PRO

You will always feel safe knowing that the Zodiac Pro is keeping a watchful eye over your home and family – both when you are away, and when you are sleeping and the rest of the house is armed against intrusion. Zodiac Pro sensors have smart electronics which identify the movement of a person through the house when it is armed. They can be located in any room of your home.

ZODIACTM QUAD

This sensor offers you additional security for those areas in your home which are more susceptible to false alarm hazards – that is, factors such as warm air flow from heating systems, moving curtains on windows that might be open or in the path of moving air, and sudden spot temperature changes such as heat from the sun directly into a room. The quad sensor needs to see the same changes occur in more than one area of the room in order for an alarm to be triggered.

ZODIACTM PET

Advanced electronics and special lenses assure you that the Zodiac Pet will provide you with superior protection and still allow you to keep pets inside when the security system is armed. It understands the difference between a human form and an animal, so your pets have the freedom of movement between rooms when you're not home. The Zodiac Pet makes sure your pet is considered a part of the family you want to protect.

That extra touch...

Swivel brackets come supplied as standard with the Zodiac Pro & Quad. These provide for optimal wall or ceiling mounting, giving you complete flexibility and versatility for every type

of residence. You can have the sensor mounted at the right height and angle to maximise protection and coverage.
